

Marta Vigara

Backend Software Engineer

Madrid, Spain · marta.vigara.gonzalez@gmail.com · linkedin.com/in/martavigara · github.com/martamakes · distrify.me

PROFILE

Backend-focused engineer who builds and operates a production SaaS used by 150+ artists: APIs, PostgreSQL, payment and royalty data flows, security and LLM integrations, all covered by automated tests in CI. Building C/C++ and Unix fundamentals at 42 Madrid, with 20+ years of client and team experience behind me.

TECHNICAL SKILLS

Languages	C, C++, Python, TypeScript/JavaScript, SQL, Bash
Backend	REST APIs, Node.js, Next.js (API routes), Prisma ORM, webhooks, Odoo (Python)
Security	Field-level encryption, HMAC, MFA & step-up auth, audit logging, GCP Secret Manager
Data	PostgreSQL (Neon), Redis; relational modeling, migrations, idempotent imports, reconciliation
AI / LLMs	Claude API integrated in production; AI coding assistants for exploration, tests and review
Testing & Ops	Vitest, Git & GitHub, GitHub Actions (CI/CD), Docker & Docker Compose, Linux/Unix, OWASP ZAP
Languages (spoken)	Spanish (native), English (C2, Cambridge Proficiency); four years working between Spain and the USA

EXPERIENCE

Founder & Full-stack Engineer (backend lead) · Distrify.me 2022 – Present · Madrid

Music distribution & marketing SaaS for independent artists in Spain and Latin America. Sole engineer.

- Designed and built the backend (Next.js API routes, **PostgreSQL + Prisma**) of a platform where **150+ artists** distribute releases and get paid; **3 years in production**.
- Built the **royalties pipeline**: parses distributor CSV reports, splits revenue across multiple beneficiaries with exact decimal arithmetic and reconciles totals. Imports are **idempotent** and writes run through a dry-run plan and a commit gate.
- Protected financial data (bank accounts) with **field-level encryption**, HMAC-based lookups and keys in **GCP Secret Manager**; a Prisma write guard and CI checks block unencrypted writes.
- Secured admin access with **MFA**, step-up authentication, rate limiting, break-glass approval flows and a full **audit log**.
- Integrated third-party services through **signed webhooks** (Stripe, Digidig identity verification) and the **Claude API** for AI marketing workflows.
- Wrote **82 Vitest test files** (unit, integration and regression) run on every push in **GitHub Actions**, alongside OWASP ZAP security scans.

Freelance Backend Developer · Business systems & automation 2022 – Present · Remote

- Built custom **Odoo modules in Python** (invoicing, treasury, accounting, Spain's **Verifactu** e-invoicing) and **n8n** automations over REST APIs.

Technology & Digital Business Trainer · Grouplance Formación 2021 – Present · Madrid

- Design and teach programming, digital marketing and business courses; explaining technical concepts to non-technical audiences.

Founder · SaludShopping.com 2012 – 2021 · Madrid

- Built and operated, on my own, a PrestaShop e-commerce store for respiratory therapy equipment, selling B2C and to public healthcare providers. Company sold.

Earlier career 1997 – 2011 · Spain & USA

- TV production and branded content (Mediapro, Boomerang TV, Zeppelin TV), music publishing (BMG), concert promotion, US tours and public-tender administration.

EDUCATION & TRAINING

42 Madrid · Software engineering, Common Core In progress · Madrid

- ft_irc (C++)**: IRC server handling multiple clients over TCP with non-blocking, event-driven I/O.
- Minishell (C)**: Bash-like shell: process creation, pipes, redirections, file descriptors and signals.
- Philosophers (C)**: Concurrency with threads and mutexes; preventing deadlocks and data races.
- CPP Modules (C++)**: OOP, STL, templates, memory management · **Inception**: Docker Compose, NGINX, MariaDB.
- Code review**: peer-to-peer program with no teachers; I review other students' code and defend my own in every project.

Master's in Audiovisual Production · Audiovisual Communication & Multimedia studies (UFV Madrid)
